DREW STRAYTON, E.I.T.

240.215.5318 | dstray44@gmail.com | linkedin.com/in/drew-strayton/

EDUCATION

Duke University, Durham, NC — *December 2027*
Masters of Engineering, Design and Technology Innovation

Wake Forest University, Winston-Salem, NC — *May 2024*
Bachelor of Science, Engineering — Mechanical & Electrical Engineering Concentrations — *GPA: 3.87*
Minor: Mathematics

TECHNICAL SKILLS

- SolidWorks (CSWP), Creo, Inventor, and Fusion 360 to create designs and document projects
- Electrical print reading, cabinet wiring, and PLC programming experience
- SAP, Power BI, and Microsoft Office experience to analyze data, and present findings

PROFESSIONAL EXPERIENCE

Design Engineering Intern — Overland Park, KS
Dimensional Innovations — *June 2026 – August 2026*
- Translated design concepts into manufacturable SolidWorks assemblies and BOMs while sourcing all components
- Developed fabrication, assembly, and electrical drawing packages to guide construction of custom elements
- Incorporated feedback from design reviews and validation testing to improve solutions

Manufacturing Engineer — Lancaster, PA
Parker Hannifin Aerospace Filtration — *June 2025 – June 2026*
- Supported new product startups through 3D design, physical prototyping, and manufacturing process development
- Troubleshot manufacturing issues and developed solutions to improve process performance, quality, and efficiency
- Collaborated with automation vendors and integrators to design, test, and integrate new equipment into production

Manufacturing Engineering Leadership Development Associate — Columbia, TN
Parker Hannifin Innovation Center — *June 2024 – June 2025*
- Developed solutions to solve manufacturing problems, using Inventor and 3D printing for rapid prototyping
- Designed and implemented automated manufacturing machinery, reducing costs, and increasing throughput
- Led a research project on 3D printing's feasibility for mass production, presenting findings to company leadership

Lean Manufacturing Engineering Intern — Greensboro, NC
Parker Hannifin Aerospace Filtration — *May 2023 – December 2023*
- Modeled components and drafted drawings for over 20 filtration products and fixtures in SolidWorks and Inventor
- Tested and validated tight dimensional tolerances on aerospace components
- Led multiple new product introductions through assembling full shop packets and releasing them in local ERP

ENGINEERING PROJECTS

Dispense and Weld Machine — *February 2025 – September 2025*
- Developed an automated dispense and weld system, integrating dual welds and adhesive dispensing in one machine
- Applied human-centered design principles to prioritize accessibility, ergonomics, and employee safety
- Delivered $250K in annual labor savings while improving throughput, weld consistency, and process efficiency

Polyurethane Quad-Sealing Production Mold — *August 2024 – December 2024*
- Developed filter production mold to seal a 2ft x 2ft x 4in filter on four sides in polyurethane in one dispense shot
- Utilized resin 3D printing to achieve tight tolerances around the filter geometry
- Developed full-size aluminum tooling through iterative 3D-printed prototyping and validation

Disc Golf Simulator — *August 2023 – May 2024*
- Created a disc module using onboard sensors to track throw data and send necessary info to a local computer
- Developed software to take throw data and display an accurate throw projection in a gamified environment
- Participated in monthly design reviews with stakeholders and demonstrated simulator function in project showcase

LEADERSHIP AND COMMUNITY INVOLVEMENT

Machine Shop Instructor — Lancaster, PA
Make717 - Lancaster Community Makerspace — *August 2025 – June 2026*
- Organized and led training workshops with Makerspace members on manual and CNC machining
- Handled equipment maintenance, validation, and standard operating procedure documentation
